

Claim 3 (original): A syringe comprising:

- a) at least one hollow syringe barrel;
- b) a plunger member comprising a base and walls, said walls extending from said base;
- c) said plunger member comprising a plunger shaft extending from said base; and
- d) said plunger shaft comprising a piston.

Claim 4 (original): The syringe of claim 1, wherein said plunger member comprises a plunger handle member.

Claim 5 (original): The syringe of claim 2, wherein said plunger member comprises a plunger handle member.

Claim 6 (original): The syringe of claim 3, wherein said at least one syringe barrel comprises a handle member

Claim 7 (original): The syringe of claim 4, wherein said plunger handle member is molded to a rear terminus of said plunger shaft.

Claim 8 (original): The syringe of claim 1, wherein a rear terminus of said corrugated sheath is molded to a plunger handle member.

Claim 9 (original): The syringe of claim 2, wherein, said corrugated segment is molded to a plunger handle member.

Claim 10 (original): The syringe of claim 5, wherein said plunger handle member is molded to a rear terminus of said plunger shaft.

Claim 11 (original): The syringe of claim 3, wherein said walls extending from said base concentrically surround said plunger shaft.

Claim 12 (original): The syringe of claim 3, wherein said at least one hollow syringe barrel comprises a glide space.

Claim 13 (original): The syringe of claim 1, wherein said corrugated sheath is expandable and collapsible along the longitudinal axis of said hollow syringe barrel.

Claim 14 (original): The syringe of claim 2, wherein said corrugated segment is expandable and collapsible along the longitudinal axis of said hollow syringe barrel.

Claim 15 (original): The syringe of claim 1, wherein said hollow syringe barrel comprises a syringe barrel handle member.

Claim 16 (original): The syringe of claim 15, wherein said syringe barrel handle member is molded or formed on the rearward end terminus of the syringe barrel.

Claim 17 (original): The syringe of claim 15, wherein a forward end terminus of said corrugated sheath is attached to a rearward end face surface of said syringe barrel handle member.

Claim 18 (original): The syringe of claim 3, wherein said at least one syringe barrel comprises sealing rings.

Claim 19 (original): The syringe of claim 3, wherein said plunger member comprises sealing rings.

Claim 20 (original): A syringe comprising:

- a) a hollow syringe barrel;
 - b) a plunger member;
 - c) said plunger member comprising a plunger shaft and piston; and
 - d) a contaminant shield.
-

Claim 21 (new): The syringe of claim 1, wherein said corrugated sheath is expandable and collapsible along a longitudinal axis of said plunger shaft.

Claim 22 (new): The syringe of claim 1, wherein said syringe barrel has measuring indicia printed thereon.

Claim 23 (new): The syringe of claim 1, wherein said syringe barrel, said plunger shaft, said corrugated sheath are colored or tinted.

Claim 24 (new): The syringe of claim 1, wherein said syringe is provided with a removable closure cap.

Claim 25 (new): The syringe of claim 1, wherein said syringe is provided with a removably attachable needle or permanently attached needle.

Claim 26 (new): The syringe of claim 1, wherein said syringe is provided with a brace means.
